Keywords information, television, image, consumption, Internet, radio, mass-media.

Abstract

The article focuses on the main types of broadcasting information by mass-media channels in consumer societies. These types vary according to different targets they set that is visual impact in the case of television, interaction and imagination in the case of the Internet, audio information for the radio. All these media channels develop private and public opinion and manipulate information, playing an important part in contemporary consumer's behavior.
